

The Quality Policy Statement

We will always strive to supply pipeline quality products and provide full technical support to all stakeholders. In so doing we will always abide by customer, regulatory and statutory requirements.

Furthermore, we will always prospect new avenues to ensure continual growth in terms of innovative products in line to the context within which we operate and in support to our strategic plans.

The achievement of these are ensured by providing the most conducive infrastructural and working environment and a Quality Management System, which is improved continually for its suitability, adequacy and effectiveness.

Further, this Quality Policy is communicated, explained and understood by everyone in the organisation.
